

Matte White Diffusion Projector Screen

Model: F-500W

Material: High-Definition Fiberglass White Projection Screen

Image Size: 150''-500''

Features:

The screen adopts high-definition fiberglass white fabric with a unique texture that eliminates direct reflection found in traditional screens. By applying the principle of diffuse reflection, it ensures a perfectly uniform and consistent projection effect across the entire surface.

The housing is made of galvanized steel with an internationally popular equilateral hexagonal design, delivering durability and a sleek, modern appearance.

Equipped with an advanced tubular positioning system, it achieves precise positioning with an accuracy of up to 1 mm — an industry first.

It delivers clear images from any viewing angle, is washable, colorfast, fire-resistant, moisture-proof, environmentally friendly, and ensures long-term viewing comfort without eye fatigue. The screen is suitable for use with all types of projectors.

Gain: 1.2

Optimal Viewing Angle: 120°–160°
